Palm vein smart  
door lock

DDL702-MVP-17HWS

## Palm vein unlocking

As easy as a snap

Discover the latest palm vein unlock with a simple scan! Philips DDL702-MVP-17HWS employs palm vein recognition, effortlessly unlocking as you raise your palm. Enjoy the convenience of touch-free, spatial sensing door access for your family.

### Palm vein recognition unlock

A simple palm scan instantly opens the door as you approach. Palm vein recognition utilizes near-infrared light absorption of hemoglobin present in flowing blood to capture precise images, enabling secure unlocking through palm vein comparison. With live recognition, it's precise, secure, and offers touch-free advantages, overcoming shallow fingerprint and dryer concerns. Suitable for the entire family.

### 24/7 front door guarding

Once connected to the network and paired with the WeChat Mini Program\*, the DDL702-MVP-17HWS sends doorbell messages, access records, and lock anomaly alerts directly to your phone through pop-up notifications. This allows you to effortlessly monitor the status of your front door anytime, anywhere, ensuring peace of mind and security.

\*APP: the DDL702-MVP-17HWS works with App "Philips Home Access".

### Visual door viewer

When a visitor rings the doorbell, the lock sends a quick notification to your WeChat Mini Program. Click to accept the call, engage in a seamless two-way audio chat, and check your doorway remotely. The visual door viewer auto-captures photos or videos when the doorbell rings. Even if you miss the call, you can always review visitor logs at any time through the message history.

### Wide-angle night vision camera

The DDL702-MVP-17HWS features a wide-angle camera and four low-power infrared lights, offering both day and night vision modes. In low light, the infrared lights automatically activate, transitioning to night vision. This ensures clear facial recognition within a 2-meter range, even in dimly lit environments near the lock.

## Cloud storage\*

Upon activating the cloud storage service, DDL702-MVP-17HWS securely uploads captured/recorded information to the cloud storage server in encrypted form. In case of lock misuse or damage, rest assured that the data stored in the cloud will remain intact. You can conveniently access and view this information anytime through the WeChat Mini Program, ensuring your data is always secure and accessible.

## Real-time push alerts

Complete security protection matters for every family. With anti-dismantling, system lockout, and loitering detection, the Philips DDL702-MVP-17HWS sends real-time alerts to your phone, ensuring the safety of your home at all times.

## Specifications
